

## Report on Cyclomatic complexity

Master node will just maintain a queue of all the files according to the commits. Master will split the work and distribute among the workers.

Worker nodes would request the master using a work stealing approach.

Time elapsed data is shown in the table below and plotted

No of workers	Time elapsed
1	91.02560377
4	54.96154237
5	51.45959973
6	43.31814814
7	37.58226466

No of worker nodes vs. Time elapsed
